

Technical Specs

We offer a self-contained, 15 x 14 ft deployable stage

The truck is 8ft wide and we need 12 ft of clearance overhead

30X30 ft of level ground is ideal

Access to 20 amp circuit is preferred otherwise we can provide a generator

The stage takes two hours to set up properly, but it all really depends on the specifics of the situation. If possible we usually set the stage up the day before
